

SHOWCASE NOTICE — Documentation-Only Repository

This repository is provided as a professional documentation and demonstration showcase for the ADF Analyzer project. The full implementation source code is private and proprietary and is not published here. The public repository intentionally contains documentation, architecture diagrams, output artifacts, and usage demonstrations only.

If you would like to discuss the source code or arrange a walkthrough, please use the contact placeholders below.

 ADF Analyzer v10.1 - Ultimate Interactive Edition

 ADF Analyzer v10.1 - Ultimate Interactive Edition

 ADF Analyzer v10.1 - Ultimate Interactive Edition

version	10.1
python	3.8+
license	MIT
Streamlit	1.32+
Azure	Data Factory

Enterprise-grade toolkit for Azure Data Factory ARM template analysis with interactive dashboard and comprehensive Excel reporting.

TABLE OF CONTENTS

-  Overview
-  Quick Start
-  Architecture
-  Key Features
-  Dashboard Features
-  File Structure
-  Installation & Setup
-  Usage Guide
-  Output Examples
-  Development

OVERVIEW

ADF Analyzer v10.1 is an **enterprise-grade toolkit** designed to parse, analyze, and visualize Azure Data Factory (ADF) ARM templates with unprecedented speed and detail. This version introduces a modernized Streamlit dashboard with dual-mode operation, comprehensive documentation system, and professional Excel reporting capabilities.

What's New in v10.1

-  **Dual-Mode Dashboard:** Choose between "Generate Excel" and "Upload & Analyze" workflows
-  **Wrapper System:** Production-ready `adf_runner_wrapper.py` with Unicode handling and auto-discovery
-  **Enhanced Documentation:** Complete in-app documentation with 5 comprehensive sections
-  **Modern UI:** Streamlined interface with enhancement configuration management
-  **Advanced Analytics:** Dependency tracking, lineage analysis, and impact assessment
-  **Comprehensive Validation:** Built-in verification system with detailed reports

Supported Resources

Category	Count	Examples
Activities	44+	Copy, DataFlow, Lookup, Execute Pipeline, Databricks, Azure Function
Datasets	25+	SQL Server, Blob Storage, CosmosDB, BigQuery, Office365
Linked Services	15+	Azure SQL, Storage Account, Key Vault, Databricks
Triggers	7+	Schedule, Tumbling Window, Event-based, Manual
Others	20+	Integration Runtimes, Managed VNets, Private Endpoints

QUICK START

5-Minute Setup

```
# 1. Clone or download the repository
git clone https://github.com/AvinashAnalytics/Azure-Data-Factory-Analyzer-
Ultimate-Interactive-Edition.git
cd Azure-Data-Factory-Analyzer-Ultimate-Interactive-Edition/armv10

# 2. Install dependencies
pip install streamlit pandas openpyxl plotly networkx

# 3. Quick analysis (recommended entry point)
python adf_runner_wrapper.py your_template.json
```

```
# 4. Launch interactive dashboard
streamlit run adf_dashboard.py
```

Entry Points

Method	Use Case	Command
 Wrapper (Recommended)	Production analysis	<code>python adf_runner_wrapper.py template.json</code>
 Dashboard	Interactive analysis	<code>streamlit run adf_dashboard.py</code>
 Patched Runner	Enhanced analysis	<code>python adf_analyzer_v10_patched_runner.py template.json</code>
 Direct Engine	Core analysis only	<code>python adf_analyzer_v10_complete.py template.json</code>

ARCHITECTURE

```

Component Relationships

- 🔑 **Wrapper Layer:** `adf_runner_wrapper.py` - Safe execution with Unicode handling
- 🚀 **Orchestrator:** `adf_analyzer_v10_patched_runner.py` - Business logic coordination
- ⚙️ **Core Engine:** `adf_analyzer_v10_complete.py` - ARM template parsing

-  **Enhancement:** `adf_analyzer_v10_excel_enhancements.py` - Professional Excel output
 -  **Dashboard:** `adf_dashboard.py` - Interactive Streamlit interface
-

KEY FEATURES

Analysis Capabilities

Comprehensive Parsing

- All ADF resource types supported
- Activity detection and classification
- Dataset and linked service analysis
- Trigger processing and validation
- Integration runtime assessment

Dependency Analysis

- Complete dependency graph construction
- Circular dependency detection (DFS algorithm)
- Orphaned resource identification
- Impact analysis (BFS traversal)
- Lineage tracking and visualization

Health Assessment

- Factory health score (0-100 scale)
- Quality score with deduction system
- Resource utilization metrics
- Performance bottleneck identification
- Security checklist validation

Advanced Metrics

- Resource distribution analysis
- Complexity heat mapping
- Performance insights
- Cost optimization recommendations
- Best practices compliance

Excel Reporting Features

- ☒ **Core Formatting** - Professional styling, borders, colors
- ☒ **Conditional Formatting** - Data bars, color scales, icon sets
- ☒ **Hyperlinks** - Navigation between sheets
- ☒ **Enhanced Summary** - Executive dashboard with project banner
- ☒ **Advanced Dashboard** - Health score, complexity maps, insights
- ☒ **Performance Analysis** - Bottleneck identification and recommendations

-  **Security Assessment** - Comprehensive security checklist
-  **Cost Analysis** - Resource utilization and optimization

DASHBOARD FEATURES

Dual-Mode Operation

Mode 1: Generate Excel

- Upload ARM template
- Configure enhancement options
- Generate professional Excel report
- Download enhanced results

Mode 2: Upload & Analyze

- Upload existing Excel analysis
- Interactive data exploration
- Real-time analytics and visualizations
- Export filtered results

Documentation System

The dashboard includes a comprehensive documentation system with 5 main sections:

Tab	Content	Purpose
 Dashboard Tiles	Metric definitions and data sources	Understanding dashboard metrics
 Technical Logic	Algorithms and scoring methods	Technical reference
 Python Files	Complete file structure overview	Developer guide
 Complete Guide	Project documentation and setup	User manual
 Configuration	Settings and customization	Configuration guide

Interactive Analytics

-  **Health Gauge** - Visual factory health indicator
-  **Network Graphs** - Interactive dependency visualization
-  **Metric Tiles** - Real-time analytics with verification badges
-  **Filtering** - Advanced filtering and search capabilities
-  **Export Options** - CSV, JSON, Excel export functionality

FILE STRUCTURE

```

```

🔧 INSTALLATION & SETUP

Prerequisites

- **Python 3.8+** (Recommended: 3.9 or 3.10)
- **Windows/Linux/macOS** (Cross-platform support)
- **4GB RAM minimum** (8GB recommended for large templates)

Method 1: Direct Installation

```

# Install core dependencies
pip install streamlit pandas openpyxl plotly networkx

# Optional: Install additional packages for enhanced features
pip install matplotlib seaborn xlswriter

```

```
# Verify installation
python scripts/verify_installation.py
```

Method 2: Virtual Environment (Recommended)

```
# Create virtual environment
python -m venv adf_analyzer_env

# Activate environment
# Windows:
adf_analyzer_env\Scripts\activate
# Linux/macOS:
source adf_analyzer_env/bin/activate

# Install dependencies
pip install -r requirements.txt
```

Method 3: Using Setup Script

```
# Run automated setup
python scripts/setup_environment.py

# Follow interactive prompts for:
# - Dependency installation
# - Configuration setup
# - Environment validation
```

USAGE GUIDE

Command Line Usage

Production Analysis (Recommended)

```
# Basic analysis
python adf_runner_wrapper.py your_template.json

# With custom output directory
python adf_runner_wrapper.py your_template.json --output ./reports

# Enhanced analysis with all features
python adf_analyzer_v10_patched_runner.py your_template.json --enhanced
```

Dashboard Mode

```
# Launch interactive dashboard
streamlit run adf_dashboard.py

# Custom port and configuration
streamlit run adf_dashboard.py --server.port 8502 --server.headless true
```

Dashboard Workflows

Workflow 1: Generate Excel Report

1.  **Upload Template**
 - Select ARM template file (.json)
 - Validate template structure
 - Preview template summary
2.  **Configure Enhancements**
 - Toggle Excel enhancement features
 - Customize dashboard options
 - Set performance parameters
3.  **Generate Analysis**
 - Click "Generate Enhanced Excel"
 - Monitor real-time progress
 - Review analysis summary
4.  **Download Results**
 - Download enhanced Excel report
 - Export additional formats (CSV, JSON)
 - Save configuration for reuse

Workflow 2: Upload & Analyze

1.  **Upload Analysis**
 - Select existing Excel analysis
 - Validate data structure
 - Load into dashboard
2.  **Explore Data**
 - Use interactive analytics
 - Filter and search resources
 - Generate custom visualizations
3.  **Generate Insights**

- View health assessments
- Analyze dependency graphs
- Identify optimization opportunities

4. 📄 Export Results

- Download filtered data
- Export visualizations
- Generate summary reports

Configuration Management

Excel Enhancements Settings (Dashboard)

- Location in UI: Sidebar → "⚙️ Excel Enhancements settings"
- Persistence: Saved to `core/enhancement_config.json` and applied immediately at runtime
- Master toggle: If disabled, the app bypasses all beautification and calls the original export (no auto-linking)
- Granular toggles: Each phase (core formatting, conditional formatting, hyperlinks, protection, page setup) can be enabled/disabled individually
- Sheet protection: Optional password; leave blank for no password (Summary sheet remains unprotected by design)
- Reset: Click "Reset to defaults" to restore the built-in default configuration

Enhancement Configuration (on disk)

```
{
  "excel_enhancements": {
    "enabled": true,
    "core_formatting": {
      "enabled": true,
      "column_sizing": true,
      "number_format": true,
      "alignment": true,
      "borders": true,
      "row_shading": true,
      "header_style": true
    },
    "conditional_formatting": {
      "enabled": true,
      "data_bars": true,
      "icon_sets": true,
      "color_scales": true,
      "status_highlighting": true
    },
    "hyperlinks": {
      "enabled": true,
      "summary_navigation": true,
      "auto_convert_references": true
    }
  }
}
```

```

    },
    "protection": {
      "enabled": false,
      "password": null
    },
    },
    "enhanced_summary": {
      "enabled": true,
      "project_banner": true,
      "executive_summary": true,
      "critical_alerts": true,
      "metrics_dashboard": true,
      "resource_overview": true,
      "recommendations": true
    },
    },
    "advanced_dashboard": {
      "enabled": true,
      "health_score": true,
      "cost_analysis": false,
      "complexity_heat_map": true,
      "performance_insights": true,
      "top_pipelines": true,
      "security_checklist": true,
      "activity_distribution": true,
      "network_stats": true,
      "change_risk": true
    },
    },
    "page_setup": {
      "enabled": true,
      "orientation": "landscape"
    }
  }
}

```

Dashboard Configuration

```

{
  "ui": {
    "theme": "default",
    "sidebar_state": "expanded"
  },
  "performance": {
    "cache_enabled": true,
    "max_file_size": "200MB"
  },
  "features": {
    "network_graphs": true,
    "advanced_charts": true
  }
}

```

OUTPUT EXAMPLES

Excel Report Structure

Sheet	Content	Purpose
 Summary	Executive dashboard with key metrics	High-level overview
 Factory	Complete factory resource inventory	Detailed resource listing
 Activities	Activity analysis with types and usage	Activity insights
 Datasets	Dataset categorization and lineage	Data source analysis
 LinkedServices	Connection analysis and validation	Infrastructure review
 Triggers	Trigger configuration and scheduling	Automation analysis
 Dependencies	Complete dependency mapping	Impact analysis
 DataLineage	End-to-end data flow tracking	Lineage visualization
 Issues	Problems and recommendations	Quality assessment

Health Score Calculation

```
# Health Score Formula
if pipelines > 0:
    health_score = int((1 - orphaned / pipelines) * 100)
else:
    health_score = 100

# Status Thresholds
# 90-100: Excellent (●)
# 75-89: Good (●)
# 60-74: Fair (●)
# <60: Needs Attention (●)
```

Quality Score Deductions

Starting from 100, deductions applied for:

- **Circular Dependencies:** -10 points per cycle (max -30)
- **Orphaned Resources:** Based on percentage (max -20)
- **Broken Triggers:** -5 points per broken trigger (max -15)

DEVELOPMENT

Extending the Analyzer

Adding New Activity Types

1. Update Core Parser (`adf_analyzer_v10_complete.py`)

```
def handle_new_activity_type(self, activity):
    """Handle new custom activity type"""
    return {
        'type': 'CustomActivity',
        'properties': activity.get('typeProperties', {}),
        'dependencies': self.extract_dependencies(activity)
    }
```

2. Add Patch Support (`adf_analyzer_v10_patch.py`)

```
def patch_new_activity_handling(self, analyzer):
    """Patch for new activity type support"""
    original_method = analyzer.parse_activity

    def enhanced_parse_activity(activity):
        if activity.get('type') == 'CustomActivity':
            return self.handle_new_activity_type(activity)
        return original_method(activity)

    analyzer.parse_activity = enhanced_parse_activity
```

3. Update Enhancement Layer (`adf_analyzer_v10_excel_enhancements.py`)

```
def format_custom_activity_sheet(self, workbook, worksheet):
    """Format custom activity analysis"""
    # Add custom formatting logic
    pass
```

Contributing Guidelines

1. **Fork the repository** and create a feature branch
2. **Follow code style** conventions (PEP 8 for Python)
3. **Add comprehensive tests** for new functionality
4. **Update documentation** for any new features
5. **Submit a pull request** with detailed description

Testing Framework

```
# Run comprehensive tests
python test_metrics.py
```

```
# Run enhanced testing suite
python test_metrics_enhanced.py

# Real-world template testing
python verify_real_world.py

# Performance benchmarking
python test_new_metrics.py
```

DOCUMENTATION

Complete Documentation Suite

The project includes comprehensive documentation accessible both as files and within the dashboard:

Dashboard Tiles Reference ([TILES.md](#))

- Complete metric definitions
- Data source explanations
- Calculation methodologies
- Troubleshooting guides

Technical Logic ([LOGIC.md](#))

- Algorithm descriptions
- Scoring methodologies
- Detection logic explanations
- Mathematical formulas

Python Files Reference ([PYTHON_FILES_REFERENCE.md](#))

- Complete file structure
- Purpose and functionality
- Usage examples
- Integration points

Documentation Index ([DOCUMENTATION_INDEX.md](#))

- Master navigation guide
- Quick reference links
- Getting started guides
- Best practices

Accessing Documentation

In-Dashboard Access

Dashboard →  Documentation Tab → Choose Section

- └─  Dashboard Tiles
- └─  Technical Logic
- └─  Python Files
- └─  Complete Guide
- └─  Configuration

File System Access

```
# View documentation files
ls docs/
cat TILES.md
cat LOGIC.md
cat PYTHON_FILES_REFERENCE.md
```

TROUBLESHOOTING

Common Issues & Solutions

Template Parsing Errors

Problem: "Failed to parse ARM template"

```
# Solution 1: Validate JSON structure
python -m json.tool your_template.json

# Solution 2: Check file encoding
file your_template.json

# Solution 3: Use wrapper for better error handling
python adf_runner_wrapper.py your_template.json
```

Memory Issues with Large Templates

Problem: "MemoryError" or slow processing

```
# Solution: Use chunked processing
# In enhancement_config.json:
{
  "advanced_dashboard": {
    "cost_analysis": false, // Disable memory-intensive features
    "complexity_heat_map": false
  }
}
```

```
}  
}
```

Dashboard Connection Issues

Problem: Dashboard won't start

```
# Solution 1: Check port availability  
netstat -an | find "8501"  
  
# Solution 2: Use different port  
streamlit run adf_dashboard.py --server.port 8502  
  
# Solution 3: Clear Streamlit cache  
streamlit cache clear
```

Excel Generation Failures

Problem: "Excel file corrupted" or generation fails

```
# Solution 1: Use patched runner  
python adf_analyzer_v10_patched_runner.py template.json  
  
# Solution 2: Disable problematic enhancements  
# Edit enhancement_config.json to disable specific features  
  
# Solution 3: Check output directory permissions  
ls -la output/
```

Getting Help

-  **Documentation:** Check in-dashboard documentation system
-  **Issues:** Report bugs on GitHub repository
-  **Discussions:** Use GitHub Discussions for questions
-  **Support:** Contact maintainers for enterprise support

LICENSE

This project is licensed under the MIT License - see the [LICENSE](#) file for details.

ACKNOWLEDGMENTS

- **Azure Data Factory Team** - For comprehensive ARM template specifications

- **Streamlit Community** - For the excellent web app framework
- **Open Source Contributors** - For various libraries and tools used

Last Updated: November 11, 2025 - v10.1

Showcase Project

ADF Analyzer Showcase

The ADF Analyzer Showcase is a demonstration of the advanced capabilities of the ADF Analyzer v10.1. It highlights the following features:

- **Interactive Dashboard:** Explore and analyze Azure Data Factory ARM templates with an intuitive interface.
- **Comprehensive Reporting:** Generate detailed Excel reports for activities, datasets, linked services, and more.
- **Flow Architecture Visualization:** View system flow diagrams and architecture overviews.
- **Dependency Tracking:** Analyze lineage and dependencies within your data pipelines.

This project serves as a reference implementation for enterprise-grade Azure Data Factory analysis.

Flow Documentation (full)

The complete flow documentation is included below (original file: [FLOW.md](#)).

...existing content...

```
<!-- FLOW.md content starts -->
```

```
---
```

Source Code Access

The full implementation source code for ADF Analyzer is private and proprietary and is not published in this repository. The public repository is intentionally a documentation and demonstration showcase.

Access to the private source code can be arranged in the following ways (no links to private code are provided here):

- Live demo: arrange a hosted demonstration to review product behavior and outputs.
- Code walkthrough: schedule a private walkthrough where core components and

architecture are explained.

- Interview discussion: review specific implementation details during an interview or technical discussion.

To request any of the above, please contact us via the placeholders at the top of this README (Email and LinkedIn).
